-------	--------

**1**

Under the holder of the breakdown triangle there are situated screws marked in the picture B. These have to be loosened.

**A**

**B**

**2**

In order to be able to take out the lining of the trunk lid the bottom part of the blind has to be removed. This is only fastened by means of engagement hooks. Now both side parts can be taken out and finally also the big part of the lining.

**3**

After the trunk lid lining was removed pull out the plugs of the tail lamps. Afterwards the nuts on the tail lamps marked in the picture have to be removed.

**4**

When the new LED tail lamps are placed and fastened on the appropriate positions, so the plugs have to be connected again. The auxiliary wire is pinned now in the PIN 3 of the plug on the indicator.

**5**

The auxiliary wire is connected and finally laid through the boot. The other end of the wire is brazed to the black-white wire on the outer tail lamp.

**A**

**B**

For the tail lamp on the right side these steps have to be carried out analogically. However the wire on the right side has to be brazed to the black-green wire.
